1. What Is Farmapram 2mg?

Farmapram is a brand formulation of **alprazolam**, a benzodiazepine medication that acts on the central nervous system. It works by enhancing the effects of **GABA (gamma-aminobutyric acid)**, a neurotransmitter responsible for calming excessive brain activity.

By strengthening GABA's inhibitory action, Farmapram helps reduce anxiety, panic symptoms, and nervous tension. Due to its potency, it is typically prescribed for short-term or carefully monitored use under medical supervision.

2. Medical Uses of [Farmapram 2mg](#)

Farmapram 2mg is commonly prescribed for the management of:

1. Anxiety disorders

- Generalized anxiety disorder (GAD)
- Situational or acute anxiety

2. Panic disorder

- Panic attacks with or without agoraphobia

3. Stress-related conditions

- Severe nervous tension
- Acute emotional distress

In some cases, alprazolam may be used as part of a broader mental health treatment plan alongside therapy or other medications.
